Docker Enterprise Container Cloud release compatibility matrix

The Docker Enterprise (DE) Container Cloud release compatibility matrix outlines the specific operating environments that are validated and supported.

The document provides the deployment compatibility for each product release and determines the upgrade paths between major components versions when upgrading.

A DE Container Cloud management cluster upgrades automatically when a new product release becomes available. Once the management cluster has been updated, the user may trigger the managed clusters upgrade through the DE Container Cloud web UI or API.

To view the full components list with their respective versions for each DE Container Cloud release, refer to the DE Container Cloud Release Notes related to the release version of your deployment or use the Releases section in the web UI or API.

Caution!

The document applies to the DE Container Cloud regular deployments. For supported configurations of existing UCP clusters that are not deployed by DE Container Cloud, refer to [Docker Enterprise Compatibility Matrix](#).

DE Container Cloud compatibility matrix

Release	DE Container Cloud	2.0.0
Release history	Release date	Sept 16, 2020
Cluster releases (managed)	5.7.0	✓
Fully managed cluster	Universal Control Plane	3.3.3
Container orchestration	Kubernetes	1.18
Container runtime	Docker Engine - Enterprise	19.03.12
OS distributions	Ubuntu	18.04
Infrastructure platform	Bare metal	✓
	AWS	✓
	OpenStack (Octavia)	Queens
Software defined storage	Ceph	Nautilus 14.2.9
	Rook	1.3.8
Logging, monitoring, and alerting	StackLight	✓
